

The former Lockheed Martin f

continue without taking any additional cleanup measures.

In September 2016, Lockheed Martin submitted a Remedial Action Work Plan (RAWP) to the NJDEP. The plan provided a summary of remedial investigations and previous cleanup actions completed at the site. The plan also provided details for implementing the recommended groundwater remedy. In the RAWP, the Licensed Site Remediation Professional (LSRP) recommended using institutional controls and Monitored Natural Attenuation (MNA) (natural degradation) for final cleanup of site groundwater. For the NJDEP, MNA means reliance on natural attenuation processes to achieve the applicable groundwater remediation standards. These processes include a variety of physical,
